Subject: Funding for costs for development of GIS Data relating to E911 Services.

Dear Commissioners;

We support the need for the development of an address point layer to the existing GIS data and the provision of funding for the creation and maintenance of this additional layer.

It can improve and enhance existing call mapping accuracy which reduces response times and will be a critical component of NG 9-1-1. We have had some residences in the county request a 911 address that share the same driveway of another, this is beginning to become more common than it used to be. For example we have several new developments that name a new road for example "Quail Run" and have several houses on this road that share the same driveway. We have also had some family members share a driveway with two separate residences.

A proposal from Geo Comm to develop an address point layer for Harlan and Phelps County is \$77,322. This would include field GPS work with Geo Comm spending a considerable amount of time on the ground locally. Additional funding would be requested for this addition beyond the funding allocations provided to PSAPs through the 911-SAM.

Respectfully,
